Ege Yıldız

High-school student, class of 2029. Building toward cloud and platform engineering.

github.com/PTB-0

I design systems, direct AI tools to build them, and check the result with measurements instead of trust. Each project below says what I did and how AI took part.

Education

School	**High school** Class of 2029.
Exam	**AP Computer Science A** Score 4 on the 1 to 5 scale, 2026.
Exam	**AP Computer Science Principles** Score 4 on the 1 to 5 scale, 2026.
Certificates	**CS50x, CS50P, CS50AI** Harvard CS50 courses. Verification links are available.
Program	**MEF summer school** Recognised as “Outstanding Success”.

Projects

Dloudos

Pre-beta, Self-hosted

A game-server hosting platform built on a Pterodactyl fork. I added per-node isolation, Zero Trust admin access, and encrypted offsite backups that are proven by restore rehearsals.

prompt-router

npm, MIT

A package that routes a prompt to the backend that fits the task, and falls back to a local model when no API key is available.

SecretFix

npm 0.1.0, MIT

A command-line tool that finds hardcoded secrets in code and moves them into environment variables.

Skills

Languages	TypeScript, Python, Rust, Java, Go, C
Web	Next.js, React, Tailwind CSS, Node.js, Prisma, SQLite, PostgreSQL
Infrastructure	Linux, Docker, Cloudflare Zero Trust and Workers, PM2, Pterodactyl, WireGuard, MinIO, Forgejo
Testing and measuring	Vitest, Playwright, Lighthouse, fuzzing with fast-check, mutation checks
Working with AI	Claude Code, subagent workflows, MCP servers, independent review passes

Every claim on this site can be checked in a repository, the npm registry, or a certificate.
