Ege Yıldız

High-school student, class of 2029. Building toward cloud and platform engineering.

github.com/PTB-0

I design systems, direct AI tools to build them, and check the result with measurements instead of trust. Each project below says what I did and how AI took part.

Projects

Dloudos

Pre-beta, Self-hosted

A game-server hosting platform built on a Pterodactyl fork. I added per-node isolation, Zero Trust admin access, and encrypted offsite backups that are proven by restore rehearsals.

Product owner and architect. I set scope, security and rollback gates, and decide what is safe to ship.

With Claude Code: about three in four commits are co-authored by it. I write the specs and the gates, and I measure before accepting an agent's finding. Several were refuted that way.

`TypeScript, Next.js, Prisma, Pterodactyl, Cloudflare Zero Trust, PM2`

prompt-router

npm, MIT

A package that routes a prompt to the backend that fits the task, and falls back to a local model when no API key is available.

Maintainer. 61 of the 72 commits are mine. Seven releases are on npm, with CI on GitHub.

The backend-registry refactor ran as reviewed agent tasks. Sixteen task reviews passed it. The final whole-branch review found a critical regression: a documented fallback had silently broken.

`TypeScript, Node.js`

SecretFix

npm 0.1.0, MIT

A command-line tool that finds hardcoded secrets in code and moves them into environment variables.

Designer and maintainer. I scoped it, wrote the acceptance checks, and published it.

About seven in ten commits are co-authored by Claude Code. A plan review and a real install test found nine defects the unit tests could not see. One auto-fix passed its own test while writing a string instead of an environment reference.

`Node.js`

Skills

Languages	TypeScript, Python, Rust, Java, Go, C
Web	Next.js, React, Tailwind CSS, Node.js, Prisma, SQLite, PostgreSQL
Infrastructure	Linux, Docker, Cloudflare Zero Trust and Workers, PM2, Pterodactyl, WireGuard, MinIO, Forgejo
Testing and measuring	Vitest, Playwright, Lighthouse, fuzzing with fast-check, mutation checks
Working with AI	Claude Code, subagent workflows, MCP servers, independent review passes

Education

School	**High school** Class of 2029.
Exam	**AP Computer Science A** Score 4 on the 1 to 5 scale, 2026.
Exam	**AP Computer Science Principles** Score 4 on the 1 to 5 scale, 2026.
Certificates	**CS50x, CS50P, CS50AI** Harvard CS50 courses. Verification links are available.
Program	**MEF summer school** Recognised as "Outstanding Success".
